CAREER OBJECTIVE

Full stack developer with 3+ years of experience building Android and hybrid mobile apps (Kotlin, React Native, Ionic), now expanding into Python/Django and React to deliver end-to-end web solutions. Seeking a full-stack developer role where I can apply my strong foundation in API integration, UI development, and Agile collaboration to build scalable, user-focused applications.

EDUCATION & CERTIFICATION

Full Stack Development – Python — Tops Technologies — Feb 2026 – Present

M.Sc. Information Technology — GLS University — 2019 – 2021

B.C.A. (Computer Application) — Gujarat University — 2014 – 2019

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, Kotlin, Java
Backend	Django, Django REST Framework, REST API design, Firebase
Frontend	HTML5, CSS3, React, React Native, Ionic
Databases	SQLite, Django ORM, Firebase
Mobile	Android (Kotlin/Java), React Native, Ionic
Tools & Practices	Git/GitHub, GitLab, Agile/Scrum, Google Maps API, REST APIs, Postman
AI-assisted dev	GitHub Copilot, ChatGPT, Claude (Anthropic)

WORK EXPERIENCE

Software Developer — Dev Information Technology Limited — Jun 2021 – Nov 2023

- Designed and built Android applications using Kotlin, Java, React Native, and Ionic, developing lightweight UI components for optimal performance in an Agile environment.
- Owned features end-to-end — from requirements gathering and implementation to technical documentation — driving continuous process improvements.

Android Developer — Xceltec Interactive Private Limited — Dec 2020 – Jun 2021

- Evaluated new concepts, authored technical designs, and developed Android proof-of-concept apps applying core computer science and software design principles.
- Performed end-to-end app testing, bug fixing, and performance tuning across various Android devices to ensure stability.

FULL STACK PROJECTS

Expense Tracker Web Application — Python, DRF, React (Vite), Bootstrap, Axios

- Built a full-stack expense tracker with a Django REST Framework backend and a React (Vite) frontend.
- Developed expense and category CRUD APIs with month and category filters, plus a monthly summary endpoint returning totals grouped by category.
- Integrated the frontend through a shared Axios instance, keeping all data-fetching logic inside custom React hooks.
- Structured the app with reusable common components and Bootstrap styling, and added a Recharts pie chart of spending by category.

Ecommerce Web Application Python, Django, HTML/CSS, SQLite

- Built an end-to-end ecommerce app with SQLite and Django ORM modeling product, cart, and order data.
- Implemented user authentication (registration, login, logout, sessions) using Django's built-in auth module.
- Developed product listing, shopping cart, and order management with a responsive HTML/CSS front end and an integrated payment gateway.

Firebase CRUD Application JavaScript, React (Vite), Bootstrap, Firebase

- Built a CRUD web app with reusable React components for forms, listings, and edit/delete, styled with HTML/CSS and Bootstrap.
- Integrated Firebase for cloud data storage, keeping the UI in sync with the database.

FoodyApp JavaScript, React (Vite), Bootstrap, JSON Server

- Built Foody with separate user and admin logins; users browse products while admins manage products and other application data.
- Used JSON Server as a mock database and localStorage for client-side persistence.

OTHER NOTABLE PROJECTS

Park Square Homes (Buyer, User, Vendor) React Native, Redux, React Navigation, Ionic

- Analyzed the existing Ionic architecture, custom components, and third-party integrations to plan a full cross-platform migration.
- Rewrote the codebase in React Native with Redux and React Navigation, structuring the app for iOS and Android store deployment.

Ark Travels Kotlin, Android SDK, Google Maps API, WeatherAPI

- Gathered travel industry requirements and developed an Android app with auth, search, and itinerary features.
- Integrated external APIs for booking systems, mapping (Google Maps API), weather data, and social media functionality.

NDDB (Kadam for Kurien) Kotlin, Motion Sensors

- Built a tribute step-counting app using motion sensors for accurate step tracking, optimized across Android devices.
- Implemented multilingual support in 12 regional languages and collaborated on UI/UX design to drive daily user engagement.

My Care Doctor & My Care Patient Java, Kotlin

- Designed wireframes, prototypes, and user flows to streamline scheduling, messaging, and medical record access.
- Implemented document uploads and performed extensive compatibility testing and bug fixing across multiple Android OS versions.

TempsEntry Android, Kotlin

- Developed an internal Android app to record, monitor, and securely store employee and visitor temperature data.
- Implemented real-time alerts for safety threshold breaches and user-friendly forms for compliance tracking.
