

NIYATI PATEL

Full Stack Developer | Python/Django & React | Android Development Background

+91 8320424730 • niyatirpatel99@gmail.com • Ahmedabad, Gujarat • github.com/niyati2606 • linkedin.com/in/niyati-patel

CAREER OBJECTIVE

Full stack developer with 3+ years of experience building Android and hybrid mobile apps (Kotlin, React Native, Ionic), now expanding into Python/Django and React to deliver end-to-end web solutions. Seeking a full-stack developer role where I can apply my strong foundation in API integration, UI development, and Agile collaboration to build scalable, user-focused applications.

EDUCATION & CERTIFICATION

Full Stack Development – Python — Tops Technologies (Feb 2026 – Present)

M.Sc. Information Technology — GLS University (2019 – 2021)

B.C.A. (Computer Application) — Gujarat University (2014 – 2019)

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Kotlin, Java

Backend: Django, Django REST Framework, REST API design, Firebase

Frontend: HTML5, CSS3, React, React Native, Ionic

Databases: SQLite, Django ORM, Firebase Realtime Database

Mobile: Android (Kotlin/Java), React Native, Ionic

Tools & Practices: Git/GitHub, GitLab, Agile/Scrum, Google Maps API, REST APIs, Postman

AI-assisted dev: GitHub Copilot, ChatGPT, Claude (Anthropic)

FULL STACK PROJECTS

Ecommerce Web Application — Python, Django, HTML/CSS, SQLite

Practice project — Full Stack Development training, Tops Technologies

- Built a fully functional ecommerce web application end-to-end using Python and Django, covering data models, views, and templates.
- Implemented user authentication (registration, login, logout, session management) using Django's built-in auth module.
- Developed product listing, shopping cart, and order management features with a responsive front end in HTML/CSS.
- Integrated a payment gateway for secure online transactions and order confirmation workflows.
- Modeled data with SQLite and Django ORM, writing queries for product, cart, and order relationships.

WORK EXPERIENCE

Software Developer | Dev Information Technology Limited (Jun 2021 – Nov 2023)

- Designed, documented, and implemented Android applications using Kotlin, Java, and hybrid frameworks (Ionic, React Native), collaborating with cross-functional teams in an Agile environment.
- Built lightweight, reusable UI components to improve app performance on low-memory devices.
- Owned features end-to-end — requirements gathering, implementation, and documentation — to drive continuous process improvement.

Android Developer | Xceltec Interactive Private Limited *(Dec 2020 – Jun 2021)*

- Evaluated new application concepts and documented technical designs for stakeholder review.
- Built Android proof-of-concept apps, applying core computer science and software design principles.
- Performed app testing, bug fixing, and performance tuning across devices.

OTHER NOTABLE PROJECTS

Park Square Homes (Buyer, User, Vendor) — *(React Native, Redux, React Navigation, Ionic)*

- Analyzed the existing Ionic application to understand its architecture, custom components, and third-party integrations.
- Rewrote the entire codebase using React Native, replacing Ionic components with React Native equivalents and integrating libraries like React Navigation and Redux for navigation and state management.
- Set up the project structure and prepared the app for deployment on both iOS and Android platforms, following app store guidelines.

Ark Travels — *(Kotlin, Android SDK, Google Maps API, Weather API)*

- Understood the requirements and objectives of the Android travel application, including user needs, business goals, and specific features required for the travel industry.
- Developed the application using Kotlin, leveraging Android SDK and relevant libraries; implemented user authentication, search functionality, booking systems, maps integration, and itinerary management.
- Integrated external APIs such as travel booking APIs, mapping services (Google Maps API), weather APIs, and social media integration to provide additional functionality within the app.

Online Nursery Management — *(Firebase Realtime Database, Firebase Storage, RecyclerView)*

- Developed a mobile application to manage an online nursery store, featuring real-time plant catalog updates, order tracking, and secure user authentication.
- Implemented full CRUD operations for plant listings with real-time data syncing across devices using Firebase Realtime Database.
- Integrated Firebase Storage for image uploads and displayed dynamic product data with RecyclerView.
- Designed a responsive and intuitive UI using Material Design components to enhance user experience across devices.

NDDB (Kadam for Kurien) — *(Kotlin, Motion Sensors, Multilingual Support)*

- Developed a tribute-based step-counting application, motivating users to walk 10,000 steps daily in honor of Dr. Verghese Kurien.
- Enabled multilingual support with 12 regional languages, ensuring accessibility across diverse user demographics.
- Integrated motion-sensing technologies for accurate step tracking and optimized the app for performance on a wide range of Android devices.
- Collaborated with designers and senior developers to create an engaging UI/UX aligned with the app's theme and purpose.

My Care Doctor & My Care Patient — *(Java, Kotlin)*

- Designed the mobile app's UI and UX; created wireframes and prototypes to visualize the app's flow and functionality, ensuring ease of use for both doctors and patients.

- Implemented features like appointment scheduling, messaging, document upload, and access to medical records using Java/Kotlin along with relevant frameworks and libraries.
- Tested the app to identify and fix bugs, ensure compatibility with different Android devices and OS versions, and validate that all features work as intended.

TempsEntry — *(Android, Kotlin)*

- Android application for internal company use to record and monitor temperature data of employees and visitors.
- Implemented real-time temperature alerts to notify relevant staff when readings exceed predefined safety thresholds.
- Integrated secure data storage and user-friendly input forms to streamline temperature logging and compliance tracking.
